Customized Header Checklist

☐ Go to Appearance, then Header, to see how big your header should be. This will vary, depending on theme you choose. In this example, let's say the header is 900 x 300. This is measured in pixels.

☐ Once you know the size, use a free tool like PicMonkey, Canva or Stencil to create a customized header. (You can also use Photoshop or any other photo editing tool that you own)

☐ Create a header in the size you need. When you are happy with it, save it to your computer.

☐ Go back to Appearance, then Header to upload your new custom header.
